

Introducing BlackBerry Enterprise Server (BES) Express – SME

What exactly is BES Express?

A BlackBerry solution designed for businesses with a Microsoft Exchange or Small Business server.

You get many of the benefits of full BES – without investing in a separate server (for up to 75 users), software or licences. Bes Express includes 35+ IT policies to securely manage your information, passwords and mobiles.

You purchase the BlackBerry handheld and BIS tariff from us and download BES Express software for free from the RIM website. Even though, the solution is called BES Express, your BlackBerry is applied to the BlackBerry Internet Solution (BIS) tariff.

Many businesses will be confident to install and understand the BES Express solution in-house but Aerial Telephones can provide the support and installation of a full BES Express solution to your business via a complete IT support fee should your business need it.

BES Express will sit alongside BIS and BES in the O2 network portfolio, as each solution offers something different. This means you can have BES Express alongside a full BES server and separate your BlackBerry users to whichever variant their usage suits.

And, what about FULL BES?

BES is still the right solution for some larger SME customers who want things like over the air activation, increased resilience and more advanced IT/security features. And those with a Lotus or Novell email system. As stated above you can run the BES Express BIS variants and full BES variants together.

What about BlackBerry Professional Software?

BES Express replaces BPS and RIM have withdrawn it from sale for new connections but we will continue to support it for existing BPS customers.

Comparing the BlackBerry solutions
